Board of Trustees  
Regional Transportation Authority Pension Plan  
Chicago, Illinois

Dear Trustees:

We are pleased to provide our formal annual Actuarial Valuation Report as of January 1, 2018, for the Regional Transportation Authority Pension Plan (“RTA Pension Plan”). The actuarial valuation was performed at the request of the Regional Transportation Authority (“RTA”) and is intended for use by the RTA and those designated by the RTA. This report may be provided to parties other than the RTA only in its entirety and only with the permission of the RTA. GRS is not responsible for unauthorized use of this report.

The purposes of the actuarial valuation are to measure the Plan’s funding progress, to determine the recommended annual contribution of the RTA Pension Plan for the Plan Year commencing January 1, 2018, and ending on December 31, 2018, and to analyze plan experience during the prior year. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

The recommended annual contribution shown on page A-5 is best viewed as the minimum contribution that complies with the Board’s funding policy. Users of this report should be aware that contributions made at that rate do not guarantee benefit security. Until the plan is fully funded, we encourage the plan sponsor to contribute in excess of the recommended annual contribution to the extent possible.

This actuarial valuation assumes the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data and other information through January 1, 2018. The actuarial valuation was based upon information furnished by the Regional Transportation Authority agencies and the Plan Administrator, Reed-Ramsey, concerning benefits provided by the Regional Transportation Authority Pension Plan, financial transactions, Plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the Regional Transportation Authority agencies or Reed-Ramsey. As part of the actuarial valuation process, GRS updated service amounts for active members in accordance with the rules established with Reed-Ramsey.

Members who meet eligibility conditions may receive a lump sum benefit from the RTA Pension Plan in lieu of an annuity. The assumption basis used by the Plan Administrator to calculate lump sum payments is based on segment interest rates prescribed by the IRS and changes annually. Beginning with the 2013 actuarial valuation, the assumption basis used in the actuarial valuation to project future lump sum payments is updated annually to reflect the actual segment interest rates and mortality table being used. The other actuarial assumptions and the actuarial cost method used in this actuarial valuation are the same as those used in the prior actuarial valuation and are set forth in Section C: Actuarial Valuation Procedures.

Section B outlines the principal benefit provisions of the Plan. There have been no changes to the Plan provisions since the January 1, 2017, actuarial valuation.

To the best of our knowledge the information contained in this report is accurate and fairly presents the actuarial position of the Regional Transportation Authority Pension Plan as of the actuarial valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board.

Lance J. Weiss and Amy Williams are Members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

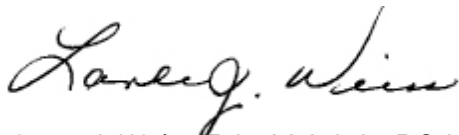

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: Plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the Plan's funded status); and changes in Plan provisions or applicable law.

The signing actuaries are independent of the Plan sponsor.

We will be pleased to review this report with you at your convenience.

Respectfully submitted,

Gabriel, Roeder, Smith & Company

Lance J. Weiss, E.A., M.A.A.A., F.C.A.

### **ACTUARIAL VALUATION RESULTS**

# Comments on the Actuarial Valuation

---

## Purpose and Data

At your request we have performed the actuarial valuation of the Regional Transportation Authority Pension Plan as of January 1, 2018.

The purposes of this actuarial valuation are as follows:

- To determine the funding status of the RTA Pension Plan as of the actuarial valuation date; and
- To determine the recommended contribution for the current fiscal year.

Accounting information, as required under GASB Statement Number 67 (pension plan accounting) and GASB Statement Number 68 (employer accounting for pension plans), is shown in a separate report. GASB Statement Numbers 67 and 68 were first effective with fiscal year ending December 31, 2014, and December 31, 2015, respectively.

We received the data from the Regional Transportation Authority agencies and Reed-Ramsey. We performed certain checks for reasonableness and found most of the data to be complete and reliable for actuarial valuation purposes. As part of the actuarial valuation process, GRS updated service amounts for active members in accordance with the rules established with Reed-Ramsey.

A total of 1,206 active members were included in the actuarial valuation as of January 1, 2018. Between the 2017 and 2018 actuarial valuations, the number of active employees increased by 50 members, or 4.3 percent. The average annual actuarial valuation pay increased by 2.1 percent, from \$81,272 to \$82,963 between the 2017 and 2018 actuarial valuations. The number of benefit recipients increased from 730 to 787, or 7.8 percent, since the last actuarial valuation. The average monthly benefit increased by 3.8 percent, from \$1,543 to \$1,601.

Section B outlines the principal benefit provisions of the Plan. There have been no changes to the Plan provisions since the January 1, 2017, actuarial valuation.

## Actuarial Assumption and Method Changes

The actuarial assumptions and the actuarial cost method remain unchanged from the prior actuarial valuation as of January 1, 2017, except for the conversion factors used to calculate lump sum benefits. Members who meet eligibility conditions may receive a lump sum benefit from the RTA Pension Plan in lieu of an annuity. The assumption basis used by the Plan Administrator to calculate lump sum payments is based on segment interest rates and mortality rates prescribed by the IRS and changes annually. Beginning with the 2013 actuarial valuation, the assumption basis used in the actuarial valuation to project future lump sum payments is updated annually to reflect the mortality rates and actual segment interest rates being used.

The Board adopted changes in the actuarial assumptions first effective with the actuarial valuation as of January 1, 2015, based on an experience study performed for the period January 1, 2008, to January 1, 2013. We recommend that an experience study be performed after completion of the actuarial valuation as of January 1, 2018, covering the period January 1, 2013, through January 1, 2018. Based on decreasing

## Comments on the Actuarial Valuation (Continued)

expectations for future rates of inflation and investment returns, we may recommend a decrease to the investment return assumption.

### Gain/Loss Analysis

During the plan year ending December 31, 2017, the unfunded actuarial accrued liability (“UAAL”) increased from \$26,282,070 as of January 1, 2017, to \$30,827,709 as of January 1, 2018, which is an increase of \$4,545,639. The key factors contributing to the change in UAAL are summarized in the following table:

Source	Change in UAAL
<b>UAAL at January 1, 2017</b>	<b>\$ 26,282,070</b>
Normal Cost and Interest on UAAL and Normal Cost	10,281,954
Recommended Contribution for 2017	(10,581,706)
Change Due to Additional Contribution in 2017	(1,300,000)
Change Due to Updated Assumptions and Methods	2,036,615
Change Due to Changes in Benefit Provisions	0
(Gain) Loss on Assets <sup>1</sup>	757,840
Salary and Demographic (Gain) Loss	3,350,936
<b>UAAL at January 1, 2018</b>	<b>\$ 30,827,709</b>

<sup>1</sup> Includes gains and losses on an actuarial value of assets basis.

### Plan Asset Return

On a market value basis, the RTA Pension Plan assets earned an investment return of approximately 16.2 percent. Partial recognition of the fiscal year end 2014 and 2015 investment losses, which was mainly offset by partial recognition of the investment gains during fiscal years ending 2013, 2016 and 2017, resulted in an estimated net asset rate of return of 7.2 percent on an actuarial basis, which compares to the assumed rate of return of 7.50 percent for fiscal year 2017.

### Statutory and Recommended Employer Contributions

The minimum employer contribution is defined in Chapter 40, Section 5/22-103 of the Illinois Compiled statutes. This section states:

1. An “under-funded pension Plan” is defined as a pension Plan which has a funded ratio of less than 90 percent at the last actuarial valuation.
2. An “under-funded pension Plan” shall contribute, in addition to amounts otherwise required, amounts sufficient to bring the funded ratio up to 90 percent over a maximum period of 50 years from January 1, 2009. (i.e., 90 percent funded by the end of fiscal year 2059)
3. The additional contributions shall be in substantially equal annual amounts over the funding period.

## Comments on the Actuarial Valuation (Continued)

---

The pension Plan document defines the employers' funding policy as contributions at least equal to an amount determined advisable by the Plan's actuary to maintain the Plan on a sound actuarial basis.

The Plan was not considered an "under-funded pension Plan" at the last actuarial valuation because the funded ratio was greater than 90 percent. Beginning with the actuarial valuation as of January 1, 2015, the Board adopted a 30-year level-dollar closed-period amortization policy, meaning the amortization period began at 30 years at the actuarial valuation as of January 1, 2015, and decreases by one year each year thereafter. This contribution policy targets a funded ratio of 100% at the end of 30 years (i.e., 100 percent funded by the end of fiscal year 2045) and therefore exceeds the minimum employer contribution as defined in the statutes.

The recommended contribution for fiscal year 2018 of \$11,592,096, based on a 30-year closed-period, level-dollar amortization policy effective January 1, 2015, increased by \$1,010,390, or 9.5 percent, from the recommended contribution of \$10,581,706 for fiscal year 2017. The increase is due to the increase in the normal cost contribution (including the expected increase of 3.25%), the asset loss on an actuarial value of assets basis during 2017 and unfavorable plan experience during the year. The recommended contribution for fiscal year 2018 of \$11,592,096 is expected to be contributed at the end of fiscal year 2018.

The actuarial value of assets is currently 97 percent of the market value of assets. There is \$7,528,507 in net asset gains currently being deferred that will be phased into the actuarial value of assets over the next four years. This will reduce the future recommended employer unfunded liability contribution, absent any future offsetting actuarial losses.

### Funded Ratio

The funded ratio measures the portion of the actuarial accrued liability (calculated based on the actuarial assumptions disclosed in this report) that is currently funded. The funded ratio is 90.4 percent based on actuarial value of assets and 92.7 percent based on market value of assets. The funded ratio is not appropriate for assessing the sufficiency of plan assets for any other purpose.

### GASB 67/68

A separate actuarial valuation report with calculations completed in accordance with the provisions of GASB Statement Nos. 67 and 68 has been issued.

### Other Observations

#### General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status

Given the Plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the Plan earning 7.50 percent on the actuarial value of assets), it is expected that:

1. The normal cost is projected to increase by 3.25% each year and the amortization payment is projected to remain level until the end of the amortization period. Gains and losses, including

## Comments on the Actuarial Valuation (Continued)

---

recognition of deferred gains and losses in the actuarial value of assets, will decrease or increase the contribution requirement;

2. The unfunded actuarial accrued liabilities will be fully amortized after 30 years from the fiscal year ending December 31, 2015 (December 31, 2045), which corresponds to the beginning of the closed amortization period established in the actuarial valuation as of January 1, 2015; and
3. The funded status of the plan will increase gradually towards a 100 percent funded ratio.

### Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

1. The measurement is inappropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligations, for example: transferring the liability to an unrelated third party in a free market type transaction.
2. The measurement is dependent upon the actuarial cost method which, in combination with the Plan's amortization policy, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. A funded status measurement in this report of 100 percent is not synonymous with no required future contributions. If the funded status were 100 percent, the Plan would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
3. The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets.

## Summary of Actuarial Valuation Results

		January 1, 2017 Results	January 1, 2018 Results

<sup>2</sup>2016 pensionable payroll for members active during both 2016 and 2017.

## Derivation of Experience (Gain)/Loss Year Ended January 1, 2018

---

Actual experience will never (except by coincidence) coincide exactly with assumed experience. It is expected that gains and losses will cancel each other over a period of years, but year-to-year fluctuations are not uncommon. Detail on the derivation of the experience (gain) loss, along with a year-by-year comparative schedule, is shown below and on the next page.

1.	Unfunded Actuarial Accrued Liability at 01/01/2017	\$ 26,282,070
2.	Normal Cost at 01/01/2017	7,730,976
3.	Interest on (1) and (2) to 01/01/2018 (at 7.50% per annum)	2,550,978
4.	Recommended Contribution for 2017 Plan Year	<u>10,581,706</u>
5.	Expected Unfunded Actuarial Accrued Liability at 01/01/2018 [(1) + (2) + (3) - (4)]	\$ 25,982,318
6.	Effect of Additional Contributions Made in FY 2017	\$ (1,300,000)
7.	Effect of Updating Lump Sum Conversion Factors	\$ 2,036,615
8.	Effect of Plan Provision Changes	\$ -
9.	Expected Unfunded Actuarial Accrued Liability at 01/01/2018 After Additional Contributions and Assumption and Plan Provision Changes [(5) + (6) + (7) + (8)]	\$ 26,718,933
10.	Actual Unfunded Actuarial Accrued Liability at 01/01/2018	\$ 30,827,709
11.	(Gain)/Loss at 01/01/2018 [(10) - (9)]	\$ 4,108,776

## Derivation of Experience (Gain) Loss Year Ended January 1, 2018 (Continued)

Year Ending December 31	Experience (Gain) Loss as % of Beginning of Year Accrued Liability	Estimated Rate of Return on Market Value of Assets	Estimated Rate of Return on Actuarial Value of Assets
2008	N/A	(22.24)%	(6.40)%
2009	N/A	24.40 %	12.68 %
2010 <sup>1</sup>	N/A	11.14 %	5.06 %
2011 <sup>2</sup>	1.67 %	(0.31)%	3.01 %
2012 <sup>3</sup>	3.53 %	12.26 %	4.16 %
2013 <sup>3</sup>	(1.38)%	15.05 %	11.15 %
2014 <sup>3</sup>	0.93 %	1.92 %	8.08 %
2015 <sup>3</sup>	3.91 %	(4.84)%	4.58 %
2016 <sup>3</sup>	2.25 %	8.44 %	5.81 %
2017 <sup>3</sup>	1.36 %	16.17 %	7.22 %
5-Year Average	1.40 %	7.05 %	7.34 %
10-Year Average	N/A	5.39 %	5.42 %

<sup>1</sup>Amounts prior to 2011 from prior actuary's valuation report as of January 1, 2011.

<sup>2</sup>2011 experience loss of 1.67% is net of change due to accrual accounting of market value of assets.

<sup>3</sup>Experience gains and losses are net of changes due to additional contributions and changes in assumptions and plan provisions.

## Analysis of Actuarial Gains and Losses

Attributable to:	(Gains) Losses During the Year

## SECTION B

---

### **BENEFIT PROVISIONS AND ACTUARIAL VALUATION DATA**

## Brief Summary of Plan Provisions as of January 1, 2018

---

Following is a summary of the major Plan provisions used in the actuarial valuation. The Regional Transportation Authority is solely responsible for the validity, accuracy and comprehensiveness of this information. If any of the Plan provisions shown below are not accurate and complete, the actuarial valuation results may differ significantly from those shown in this report and may require a revision of this report. Moreover, these Plan provisions may be susceptible to different interpretations, each of which could be reasonable, and the different interpretations could lead to different actuarial valuation results.

<b><i>Effective Date and Plan Year</i></b>	The RTA Pension Plan became effective July 1, 1976, and was amended and restated effective June 1, 1984, January 1, 1987, and January 1, 1996. The Plan year is the calendar year.
<b><i>Most Recent Amendment</i></b>	The RTA Pension Plan was most recently amended and restated effective July 1, 2016.
<b><i>Plan Year</i></b>	The Plan year prior to July 1, 1984, was the twelve-month period commencing each July 1. There was a Short Plan Year from July 1, 1984, to December 31, 1984. Thereafter, the Plan year is the calendar year.
<b><i>Employees Eligible to Participate</i></b>	Each employee on and after July 1, 1976, who commences employment with the Authority or an Affiliate Employer becomes a participant as of the later of July 1, 1976, and the first day of the month coincident with or next following the date of his commencement of employment with the Authority. Effective January 1, 1987, directors may participate if an irrevocable election is filed with the Committee. Special provisions apply to certain PACE employees who entered the Plan in 1985 and certain METRA employees who entered the Plan in 1987.
<b><i>Employee Contributions</i></b>	Employee contributions are neither required nor allowed by the RTA Pension Plan.
<b><i>Normal Retirement Date</i></b>	First day of the calendar month coincident with or next following a participant's 65 <sup>th</sup> birthday.
<b><i>Early Retirement Date</i></b>	An employee may retire early if he has attained age 55 and has completed 10 years of Vesting Service.
<b><i>Disability Retirement Date</i></b>	A participant who becomes disabled may commence receiving a disability income on the later of (1) his Normal Retirement date and (2) the cessation of long term disability benefits under the RTA Pension Plan.

# Brief Summary of Plan Provisions as of January 1, 2018 (Continued)

---

## ***Compensation***

The amounts actually paid as base salary to salaried employees and the amounts actually paid as regular, hourly wages (excluding overtime or shift differential pay) to non-salaried employees, including, at the time of deferral, amount deferred at the election of a Participant while an Employee under a cafeteria Plan, 401(k) qualified cash or deferred arrangement or eligible deferred compensation Plan maintained by an Employer which are excludable from such Participant's taxable income under Section 125, 132(f), 402 or 457 of the Code.

## ***Average Annual Compensation***

The average of the annual compensation received by a Participant in the three completed Plan years, whether consecutive or not, of his Continuous Service in which he receives his highest rates of compensation.

## ***Service Considered***

"Continuous Service," with respect to the period prior to July 1, 1976, is the total number of months of his uninterrupted service with the Authority. If an employee is not employed by the Authority during all months in a plan year after July 1, 1976, and does not complete 1,000 hours of service, he is credited with one month of Continuous Service for each 83 hours of service completed during that Plan Year. If he completes 1,000 hours of service during any Plan year after July 1, 1976, he will be credited with 12 months of service for that year, with the exception of the Short Plan Year. During the Short Plan Year commencing July 1, 1984, and ending December 31, 1984, an employee is credited with one month of Continuous Service for each month in which he has 83 hours of service.

For purposes of determining Continuous Service for vesting and eligibility for early retirement, service credited for the Short Plan Year is 12 months.

"Credited Service" is the sum of a participant's "Continuous Service" and any "Prior Service Credit" to which he is entitled. This latter term applies to employees who commenced employment prior to June 2, 1984, and also were employed on a full time basis prior to their current employment with the Authority by either 1. or 2. as follows:

1. The United States, any state, or any political subdivision of any State, or any agency created under an interstate contract approved by the Congress of the United States.

## Brief Summary of Plan Provisions as of January 1, 2018 (Continued)

---

2. Any entity which, at any time during such Employee's employment with such entity, provided public transportation or freight services by bus or rail in the United States.

The Prior Service Credit is then equal to 4% of the service under the prior Plan for each month of continuous service with the Authority which is in excess of 23 months, subject to a maximum credit of 100% of such prior service. Thus, the full credit is granted after 48 months (four years) of employment with the Authority.

All Prior Service Credits were fully accrued at the actuarial valuation date.

### ***Rule of 85***

Unreduced early retirement is available to participants between ages 55 and 65 if the Rule of 85 is satisfied. The Rule of 85 is satisfied if a participant's vesting service plus age at retirement is greater than or equal to 85 years.

### ***Normal Retirement Benefit***

A participant who retires at or after his Normal Retirement Date will receive an annual retirement income equal to the product of 1. And 2. below:

1. Final Average Annual Compensation
2. 1.75% times Credited Service (max 70%)

Thus, the maximum Credited Service is 40 years.

### ***Early Retirement Benefit***

A participant who retires at an Early Retirement Date will receive at his Normal Retirement Date an annual retirement income equal to the benefit described in the immediately preceding section. In lieu of the above benefit, a Participant may elect to receive a reduced amount of retirement income commencing on the first day of any month between his Early and Normal Retirement Dates. The reduction will be 2.0% per year for each year that his payment commencement date precedes his Normal Retirement Date. Unreduced early retirement is available to participants between age 55 and 65 if the Rule of 85 is satisfied.

# Brief Summary of Plan Provisions as of January 1, 2018 (Continued)

---

## ***Deferred Vested Benefit***

A participant who terminates his employment after completion of five years of Credited Service will be entitled to his accrued benefit commencing at his Normal Retirement Date. A participant who terminates his employment after completion of 10 years of Credited Service can elect reduced early retirement at age 55.

## ***Disability Benefit***

A disabled participant who is eligible to commence normal retirement benefits is entitled to an amount determined as if Continuous Service continued until the Normal Retirement Date. Compensation is assumed to continue unchanged from the last calendar year worked.

## ***Death Benefit (with Surviving Spouse)***

If an active or inactive participant dies prior to his Retirement Date after completion of at least five years of service and is not eligible for the Rule of 85 and is survived by a spouse to whom he has been married for at least one year, the surviving spouse will receive a monthly benefit equal to 50% of the amount of pension which would have been payable to the participant if his Retirement Date had occurred on his date of death and he had elected a Joint and Survivor Pension.

1. If the participant died after completion of 10 years of service
  - a) If the employee was age 55 or older at death, the benefit will commence to the spouse immediately.
  - b) If the employee was less than age 55 at death, the benefit will commence on the date that employee would have attained age 55.
2. If the participant died after completion of 5 years of service but less than 10 years
  - a) The benefit will commence on the date the employee would have been eligible for Normal Retirement.

If an active participant dies after his Normal Retirement Date or is Eligible for the Rule of 85 at the time of death, the Eligible Spouse will receive a monthly benefit payable immediately based on a 100% Joint and Survivor Pension. In lieu of this survivor benefit, the surviving spouse may elect instead to receive a lump sum distribution equal to the lump sum amount the participant would have been entitled to upon the date of his death.

# Brief Summary of Plan Provisions as of January 1, 2018 (Continued)

---

## **Death Benefit**

### ***(without Surviving Spouse)***

If an active or inactive participant dies prior to his Retirement Date and is not survived by a spouse, dependent children under age 26 will receive monthly benefits payable until age 26 that are actuarially equivalent to the Single Life Annuity to which the participant would otherwise be entitled.

## **Normal Form and Optional Forms of Retirement Benefits**

The normal annuity form for single participant is a single life annuity. The normal annuity form for married participants is a reduced 50% Joint and Survivor annuity. Other available options are a 10-year certain annuity, a joint and survivor annuity with or without a pop-up or any other option offered by the Committee. The lump-sum option is available to participants who retire on or after their Normal Retirement Date and who have earned service credit prior to January 1, 2011.

## **Actuarial Equivalence**

Optional payments forms are converted from a single life annuity according to actuarial factors based on the following:

### **Mortality**

1. Participants – the 94 GAR Blended mortality table (no rating of ages)
2. Beneficiaries – the 94 GAR Blended mortality table (age rated down two years)
3. Lump-sum payment – applicable mortality table under the Pension Protection Act

### **Interest**

1. Optional annuity forms – 6.0%
2. Lump-sum payments – applicable November segmented interest rates under the Pension Protection Act with five-year phase-in.

In no event will the lump sum paid be less than the lump sum amount determined using the interest rate and mortality assumptions for optional annuity forms.

## **Prior Benefit Offset**

Amounts payable from the RTA Pension Plan are offset by the percent of the Prior Service Credit attributed to the benefit payable under the current Plan multiplied by the sum of all prior benefits.

## Brief Summary of Plan Provisions as of January 1, 2018 (Continued)

---

***Changes Since Prior Actuarial  
Valuation***

There have been no changes in Plan provisions since the prior actuarial valuation.

## SECTION C

---

### ACTUARIAL VALUATION PROCEDURES

## Actuarial Cost Method

---

**Normal cost and the allocation of benefit values** between service rendered before and after the actuarial valuation date was determined using the **Entry Age Normal** actuarial cost method having the following characteristics:

- The normal cost for each individual active member equals a level percentage of an individual's covered payroll (sometimes level dollar). If this rate is contributed from the date of hire (entry age) to the date of retirement, the amount would accumulate to the present value of projected benefits at retirement; and
- The actuarial accrued liability for each individual active member equals the accrual of normal costs that are expected to have been paid in the past. The actuarial accrued liability for retired and inactive members equals the present value of benefits.

**Financing of Unfunded Actuarial Accrued Liabilities.** The unfunded actuarial accrued liability is amortized using a level-dollar 30-year amortization over a closed period beginning January 1, 2015. 27 years remain as of January 1, 2018.

**Actuarial Value of Pension Plan Assets.** The asset value is the actuarial value of assets which is calculated by recognizing 20 percent of the investment gain or loss (the difference between the actual investment return and the expected investment return, which is 7.75 percent beginning January 1, 2012 and 7.50 percent beginning January 1, 2015) on the market value of assets for each of the five following fiscal years. The actuarial value of assets is subject to a 20% corridor around market value of assets.

## Actuarial Assumptions in the Actuarial Valuation Process

---

The contribution and benefit values of the Plan are calculated by applying actuarial assumptions to the benefit provisions and census information furnished, using the actuarial cost method described on the previous page.

The principal areas of financial risk which require assumptions about future experiences are:

- Long-term rates of investment return to be generated by the assets of the RTA Pension Plan;
- Patterns of pay increases to members;
- Rates of mortality among members, retirees and beneficiaries;
- Rates of withdrawal of active members;
- Rates of disability among members; and
- The age patterns of actual retirement.

In an actuarial valuation, the monetary effect of each actuarial assumption is calculated for as long as a present covered person survives; a period of time which can be as long as a century.

Actual experience of the Plan will not coincide exactly with assumed experience. Each actuarial valuation provides a complete recalculation of assumed future experience and takes into account all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

## Actuarial Valuation Assumptions (Continued)

The actuarial assumptions were last updated first effective with the actuarial valuation as of January 1, 2015, based on the experience study covering the period January 1, 2008, through January 1, 2013.

**The assumed rate of price inflation** was 2.75%. This assumption is not used directly in the actuarial valuation. However, the price inflation assumption underlies all of the other economic assumptions (investment return, salary increase and payroll growth assumption).

**The assumed rate of investment return** used was 7.50%, net of investment expenses, annually.

**The rates of annual salary increase** used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Salary Increases	
Age	Rate
20	8.75%
25	5.75%
30	5.50%
35	4.75%
40	4.25%
45	4.00%
50	3.75%
55	3.75%
60	3.75%
65	3.25%

**The mortality table** used to measure retirement mortality was RP 2014 Employee Mortality table, sex-distinct, for pre-retirement mortality and the RP 2014 Healthy Annuitant Mortality table, sex-distinct, for post-retirement mortality. This assumption is used to measure the probabilities of members dying before retirement and the probabilities of each benefit payment being made after retirement. Based on the most recent experience study, these tables provide a margin for near-term mortality improvements.

Sample Attained Ages	Single Life Retirement Values - Retired				Single Life Retirement Values - Active			
	Present Value of \$1		Future Life		Present Value of \$1		Future Life	
	Monthly for Life		Expectancy (years)		Monthly for Life		Expectancy (years)	
	Men	Women	Men	Women	Men	Women	Men	Women
50	142.80	147.06	32.51	35.19	147.20	152.73	34.37	38.85
55	136.40	141.23	28.23	30.70	140.57	147.90	29.71	34.08
60	128.43	133.63	24.07	26.29	132.06	141.49	25.18	29.39
65	118.42	124.07	20.05	22.04	121.52	132.94	20.85	24.78
70	106.21	112.46	16.23	18.01	108.95	121.82	16.82	20.30
75	91.99	98.84	12.70	14.28	94.28	107.73	13.09	16.01
80	76.20	83.43	9.54	10.90	77.60	90.04	9.73	11.94

## Actuarial Valuation Assumptions (Continued)

---

**Rates of separation from active membership** are represented by the following table (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members terminating employment.

### Employee Withdrawal Rate (5 or more years of service)

Age	Rate	Age	Rate
Under 30 <sup>1</sup>	10.00%	38	5.00%
31	7.50%	39	4.75%
32	7.00%	40	4.50%
33	6.50%	41	4.30%
34	6.00%	42	4.10%
35	5.75%	43	3.90%
36	5.50%	44	3.70%
37	5.25%	45+	3.50%

<sup>1</sup> Rate for females younger than age 30 is 8.00%.

The following service-based rates are used instead of the age-based withdrawal rates shown above for the first four years of service:

Years of Service	Male	Female
1	12.0%	10.0%
2	11.0%	9.0%
3	10.0%	8.0%
4	10.0%	8.0%

Members who terminate service with at least 10 years of service are assumed to commence benefits at age 60. Vested terminated members with less than 10 years of service are assumed to commence benefits at age 65.

## Actuarial Valuation Assumptions (Continued)

Rates of disability were as follows:

Employee Disablement Rate		
Age	Males	Females
20	0.015%	0.015%
25	0.019%	0.024%
30	0.024%	0.040%
35	0.035%	0.068%
40	0.059%	0.106%
45	0.101%	0.162%
50	0.179%	0.267%
55	0.361%	0.476%
60	0.628%	0.580%

Rates of retirement for members eligible to retire during the next year were as follows:

Age	Reduced Benefit Rates	Unreduced Benefit Rates	Age	Unreduced Benefit Rates
55	2.0 %	5.0 %	65	20.0 %
56	2.0	2.0	66	20.0
57	2.0	2.0	67	20.0
58	2.0	2.0	68	20.0
59	2.0	2.0	69	30.0
60	10.0	20.0	70	30.0
61	10.0	10.0	71	30.0
62	10.0	10.0	72	30.0
63	5.0	10.0	73	30.0
64	5.0	10.0	74	30.0
			75+	100.0

For members with 40 or more years of service and younger than age 75, the assumed rate of retirement is 75%.

**Marital Status:** It is assumed that 75% of males and 50% of females have an eligible spouse. The male spouse is assumed to be three years older than the female spouse.

**Dependent Assumptions:** The following assumptions are made for the dependent preretirement death benefit:

- 5% of males and 10% of females will have dependent children eligible;
- The youngest child of an eligible employee is 35 years younger than the employee; and
- Members younger than age 25 do not have children.

## Actuarial Valuation Assumptions (Continued)

- Form of Payment:** 50% of lump sum eligible retirees were assumed to elect the lump sum form of payment.
- 42.5% of future retirees are assumed to elect a joint and survivor benefit. A load of -1.2% is applied to active member liabilities to account for the difference in assumptions used to calculate optional forms of payment and the assumptions used in the actuarial valuation to calculate liabilities.
- Benefit Service:** Exact fractional years of service are used to determine the amount of benefit payable.
- Decrement Timing:** All decrements are assumed to occur mid-year.
- Decrement Operation:** Turnover decrements do not operate after the member reaches retirement eligibility.
- Eligibility Testing:** Eligibility for benefits is determined based upon the age nearest birthday and service on the date the decrement is assumed to occur.
- Pay Increase Timing:** End of (fiscal) year.
- Expenses:** Expenses added to the Normal Cost were assumed to be 105 percent of the average actual administrative expenses over the past three years.

Fiscal Year End	Administrative Expense	Investment Advisor Expenses	Total Actual Expenses	Assumed Expenses in Following Fiscal Year
2017	\$ 470,446	\$ 120,000	\$ 590,446	\$ 604,303
2016	466,519	177,500	644,019	
2015	406,616	85,500	492,116	

**Service for Continuing**

**Actives:**

All members active last year and this year and worked more than 1,000 hours earned a full year of service.

For members hired during 2017, service was credited as follows:

Hired before 8/14/2017 – 12 months

Hired on or after 8/14/2017 and before 9/18/2017 – 4 months

Hired on or after 9/18/2017 and before 10/18/2017 – 3 months

Hired on or after 10/18/2017 and before 11/18/2017 – 2 months

Hired on or after 11/18/2017 and before 12/18/2017 – 1 month

Hired on or after 12/18/2017 – 0 months

**Data Adjustments:**

Pay Adjustments

For active or disabled members whose pay rate as of January 1, 2018, was

## Actuarial Valuation Assumptions (Continued)

---

zero or was not provided, we used the most recent pay rate available in the pension administration data.

### Benefit Adjustments

Based on information from the administrator, the monthly benefit provided in the census data is the amount payable to the member at actual benefit commencement (for members receiving benefits) and normal retirement age for deferred vested members and transfers.

Beneficiary benefits are calculated by multiplying the monthly benefit in the data by the joint and survivor benefit percentage (if applicable).

Deferred vested member benefits are calculated by multiplying the monthly benefit in the data by the applicable early retirement reduction factor if the benefit is assumed to commence prior to the normal retirement age of 65.

### **Lump Sum Conversion**

#### **Factors:**

The annual lump sum conversion factors are based on the November segment rates and the applicable mortality table under the Pension Protection Act.

For actuarial valuation purposes only, the lump sum conversion factors used are based on:

1. The segment rates from the November preceding the actuarial valuation for projected lump sum retirements within five years of the actuarial valuation date (and are updated annually in the actuarial valuation)
2. Assumed segment rates for projected lump sum retirements more than five years after the actuarial valuation date (rates are only updated periodically after experience studies)
3. The current applicable mortality assumption under the Pension Protection Act is used.

<b>Assumed Rates</b>	<b>Assumed Retirements within 5 Years</b>	<b>Assumed Retirements after 5 Years</b>
First Segment	2.20%	2.75%
Second Segment	3.57%	5.35%
Third Segment	4.24%	6.30%

### **GLOSSARY OF TERMS**

## Glossary of Terms

---

**Actuarial Accrued Liability (AAL).** The difference between (i) the actuarial present value of future Plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.”

**Actuarial Assumptions.** Estimates of future Plan experience such as investment return, expected lifetimes and the likelihood of receiving a pension from the Pension Plan. Demographic, or “people” assumptions, include rates of mortality, retirement and separation. Economic, or “money” assumptions, include expected investment return, inflation and salary increases.

**Actuarial Cost Method.** A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future Plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

**Actuarial Present Value of Future Plan Benefits.** The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

**Actuarial Value of Assets (AVA).** Smoothed value of assets that recognizes the difference between the expected investment return using the actuarial valuation assumption of 7.50 percent and the actual investment return over a five-year period. Dampens volatility of asset value over time.

**Amortization.** Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

**Annual Required Contribution.** The sum of the normal cost and amortization of the unfunded actuarial accrued liability.

**Asset Return.** The net investment return for the asset divided by the mean asset value. Example: if \$1.00 is invested and yields \$1.075 after a year, the asset return is 7.50 percent.

**Funded Ratio.** The actuarial value of assets divided by the actuarial accrued liability. Measures the portion of the actuarial accrued liability that is currently funded.

**Market Value of Assets (MVA).** The value of assets currently held in the trust available to pay for benefits of the Pension Plan. Each of the investments in the trust is valued at market price which is the price at which buyers and sellers trade similar items in the open market.

**Normal Cost (NC).** The annual cost assigned, under the actuarial funding method, to current and subsequent Plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

**Unfunded Actuarial Accrued Liability (UAAL).** The difference between the actuarial accrued liability and actuarial valuation assets. Sometimes referred to as “unfunded accrued liability.”
