RE: Carbon Pollution Reduction Grant – Transforming Transit: Accelerating a Zero-Emission Fleet in the Chicago Region

Dear Administrator Regan,

On behalf of the Climate Reality Project: Chicago Metro Chapter, please accept this letter of support for the Regional Transportation Authority (RTA) in their application for Carbon Pollution Reduction Grant (CPRG) implementation funding of **\$375 million for the *Transforming Transit: Accelerating a Zero-Emission Fleet in the Chicago Region* initiative**. RTA's project, in partnership with the Chicago Transit Authority (CTA), Metra, and Pace, will build on ongoing regional collaboration to reduce emissions, enhance bus, and train service, and grow ridership.

Public transit plays a critical role in advancing regional climate, economic, and equity goals. Chicago's regional transit system is an economic differentiator – linking talent to opportunities and spurring growth. Amidst a climate crisis, RTA and the region's transit agencies recognize their role in getting more people to ride public transit and transition their fleets of buses and locomotives to zero-emissions.

With \$375 million in CPRG funding for ***Transforming Transit***, the RTA will work with each of the operators to make the following investments:

- **\$125 million for CTA to purchase up to sixty 60-foot articulated buses and two charging cabinets supporting up to 40 pantograph chargers** to be housed in their 103rd Street garage and used to support service for at least two of 25 routes originating in the historic Pullman neighborhood on Chicago's Far Southeast Side – a historically disadvantaged community and one of the areas of greatest concern for pollution burdens and vulnerability.
- **\$125 million for Pace to purchase up to eighty-three 40-foot buses** to be housed in their North (Waukegan) and Southwest (Bridgeview) Division garages and deployed along 23 routes. Waukegan and Bridgeview are historically disadvantaged communities vulnerable to pollution and air quality issues.
- **\$125 million for Metra to purchase 32 trailer cars and 8 docking stations** that will allow Metra to retire 16 of its oldest diesel locomotives and add service on three high-ridership lines: Union Pacific North, Milwaukee District West, and the Rock Island Beverly Branch.

Climate Reality Project's mission is to catalyze a global solution to the climate crisis by making urgent action a necessity across every sector of society. Our shared vision is for a swift, systemic, and just transition toward net zero emissions by the middle of this century, with major steps toward that goal by 2030. A reliable, zero emission public transit system is central to achieving this goal in the Chicago region.

While these projects have direct benefits to several Chicago area communities where affected routes and stations are located, together, CTA, Metra, and Pace's initiatives go beyond neighborhood borders and benefit the entire region in reducing emissions and improving air quality, and enhancing service to reduce single occupancy vehicle trips.

This project will make significant progress on the region's goals to decrease the environmental footprint of the transportation sector and move toward a more sustainable network while prioritizing communities burdened by poor air quality. For these reasons, I urge U.S. EPA's full consideration of RTA's proposal for ***Transforming Transit: Accelerating a Zero-Emission Fleet in the Chicago Region*** under the applicable guidelines.

Sincerely,
